The users of Scimago Journal & Country Rank have the possibility to dialogue through comments linked to a specific journal. The purpose is to have a forum in which general doubts about the processes of publication in the journal, experiences and other issues derived from the publication of papers are resolved. For topics on particular articles, maintain the dialogue through the usual channels with your editor.

### About the journal

[Aims and scope](#)[Indexed in](#)[Publishing Policies & Ethics](#)[Published by](#)

## Publishing Policies & Ethics

### Ethical Publication Practices

OK

Web of Conferences journals are committed to the standards of publishing integrity and academic honesty. Editors, reviewers and authors are encouraged to refer to [The Committee on Publishing Ethics \(COPE\)](#) and to follow its [Code of conduct](#) and [guidelines](#).

Serious misconduct (for example, data fabrication, falsification or plagiarism) is taken seriously into consideration and is further investigated. When a suspicion of misconduct turns out to be confirmed, the available sanction is applied.

Before publication, *Web of Conferences* will randomly review papers from each scientific conference using the powerful text comparison tool: iThenticate. This procedure aims to prevent scholarly and professional plagiarism.

### Journals' Requirements

The journals make clear their *aims and scope*, *editorial policy* and *manuscript requirements* in terms of presentation and submissions.

- ▶ Journals' instructions are available to any contributor.

---

By using this website, you agree that EDP Sciences may store web audience measurement cookies and, on some pages, cookies from social networks. [More information and setup](#)

---

- ▶ The list of authors should accurately reflect who did the work.
- ▶ Journals only consider work that has not been published and is not being considered for publication elsewhere.
- ▶ Editors, authors and peer reviewers must disclose interests that might appear to affect their ability to present or review data objectively.
- ▶ Journals recommend the use of a specific copyright and make it available on the journal pages.

[^ Back to top](#)

## Editorial Committee

---

Editorial decisions and editorial processes are run by the editors of the proceedings who are members of the organizing committee of the event. The detailed procedures may vary from event to event according to the custom and practice of each community.

- ▶ The editors of the proceedings are committed to ensuring the quality of the publication and that what is reported is ethical, accurate and relevant to the journal.
- ▶ They have full independence and are not dictated to or influenced by any factors (political, commercial, etc.). Their decision to accept or reject a paper for publication has been based only on the merits of the work and the relevance to the journal.
- ▶ When errors are found, the editors should promote publication of corrections or retraction.

[^ Back to top](#)

## Peer Review

---

All published articles are peer reviewed.

- ▶ Journals' policy encourages the use of blinded peer review and, when it is possible, multiple reviewers.

---

By using this website, you agree that EDP Sciences may store web audience measurement cookies and, on some pages, cookies from social networks. [More information and setup](#)

- ▶ Proceedings editors must take all reasonable steps to ensure the quality of the materials they publish.

Starting March 2014, all published proceedings contain a [Statement of Peer Review](#) confirming that the editors have conducted the reviewing process in accordance with the journals' Policy on Publishing Integrity.

## Crossref indexation

---

This journal is indexed in Crossref.

The Crossref system is used for linking citations across publishers. To ensure **direct linking to and from its contents**, EDP Sciences registers its scientific research journals to Crossref. Online archives have also been indexed.

Any Crossref members can create direct links from its online references to the EDP Sciences contents, using Crossref database. Reciprocally, the online references of EDP Sciences articles include direct links to the cited articles. Such links can be created *on condition that* the reference of the cited article matches a Crossref data. In particular these direct links *only* concern references whose publishers have previously indexed their own data to Crossref.

Read more about [Crossref](#).

**Abstract.** This study aims to determine the direct effect of the learning environment on the learning outcomes about environmental balance, interest in learning on the results of learning about environmental balance, and learning environment learning to interest in learning. This research is a survey research using path analysis technique with the sample of research is student package C in SKB BonebolangoGorontalo 2016/2017 Lesson Year, which amounts to 60 people. There are three variables that are used as research objects, namely two exogenous variables that include learning environment and interest in learning and endogenous variable that is the result of learning about environmental balance. The results of the study indicate that: (a) there is a positive direct effect of the learning environment on the learning outcomes of environmental balance, (b) there is a direct positive influence of interest on the learning outcomes of environmental equilibrium, (c) there is a direct positive influence of the learning environment on learning interest, d) there is an indirect influence of the learning environment on learning outcomes through interest in learning.

## 1 Page layout

Learning as a process is influenced by several factors. As stated by the Syah (2012: 146), that "success in the learning process is influenced by two factors: internal factors (*factors from within students*), namely the state or condition of the students' physical and spiritual, interests and motivation and external factors (*external factors students*), ie environmental conditions around students. From the preliminary survey results it can be argued that the average learning outcomes on Environmental Balance are relatively low when compared with other materials.

This is due to the lack of interest in learning from students and also because of the condition of the learning environment in their poor schools. Uno [2], that learning is a process that produces behavioral changes done deliberately to gain knowledge, skills and new experiences towards the better. According to learning environment includes three components, namely family environment, school environment and community environment. So the learning environment is a condition where one can carry out the learning process.

Shah, learning is a processed activity and is a very phenomenal element in the conduct of each type and level of education [1]. Learning as a process allows one to change his behavior, Djamarah, suggests that learning is a series of activities of body and soul to obtain a

change of behavior as a result of individual experience in interaction with the environment [3]. Environmental balance is the ability of the environment to overcome the pressure of nature and from human activities, and the ability of the environment in maintaining the stability of life in it. Environmental balance will be achieved when there is an interaction of organisms with environmental factors and intercomponents interactions in an environment can run proportionally [4].

Soemarwoto, explains that the environment is a space occupied by a living human being along with other living things (plants, animals, microorganisms), and inanimate objects, such as air composed of various gases, water in the form of steam, liquid and solid, soil, minerals in soil, rocks and fossils, which support each other to meet human needs.

Experts divide the learning environment into several kinds. Sartain in Purwanto, divides the environment into three parts, namely (1) external or physical environment, is everything that exists in this world that is not human, like humans, plants, water, climate, animals etc. (2) internal environment, is everything that has been included in us, which can affect our physical growth (3) social environment, is all other people or humans that affect us.

To be able to see the success of the process of teaching and learning activities, all factors related to teachers and students must be considered. This interest

\* Corresponding author: [abdulrahmat@ung.ac.id](mailto:abdulrahmat@ung.ac.id)

in students is one of the signs of interest. According to the Shah, interest (interest) means a high tendency and excitement or a great desire for something [1]. The same thing is also expressed by Slameto, that interest is a sense of preference and a sense of attachment to a thing or activity, without anyone telling [5]. The same opinion by Winkel, says that interest is the tendency of sedentary subjects, to appeal to a particular field of study or subject and to feel good about learning the material.

## 2 Research Methods

The study was conducted within 2 months from April to May 2017. Type of research used in this study is a survey by using Path Analysis. Target population is all students of package C in SKB Bonebolango Gorontalo Lesson Year 2016/2017. Testing the validity of grains of learning results about environmental balance using the formula biserial correlation is the correlation between the test score with the total test score [6].

## 3 Results and Discussion

### 3.1 Learning Outcomes of Environmental Balance (Y)

Average score ( $\bar{Y}$ ) is 9,467; median (Me) of 14,630; mode (Mo) of 14,891; and standard deviation (SD) of 2,456. Calculation results can be seen in the appendix. If the price of mode (Mo), median (Me) and average ( $\bar{Y}$ ), then based on the assessment of the norm norm score of

learning result of environmental balance of students tend to be high.

### 3.2 Learning Environment (X1)

Average score ( $\bar{X}_1$ ) was 84,800; median (Me) of 85,804; mode (Mo) of 86.833; and standard deviation (SD) of 13,097. Calculation results can be seen in the appendix. If the price of mode (Mo), median (Me) and average ( $\bar{X}_1$ ), then based on the assessment of the norm norm score of student learning environment tends to be high.

### 3.3 Interest to learn

Average score ( $\bar{X}_2$ ) was 89,800; median (Me) of 89.260; mode (Mo) of 88.409; and standard deviation (SD) of 12,291. Calculation results can be seen in the appendix. If the price of the mode (Mo), median (Me)

and the average ( $\bar{X}_2$ ), then based on the assessment of the norm reference score of student learning interest tend to be normal.

The coefficient of the learning environment pathway to learning interest is similar to the relationship between learning interest and the learning environment. The value of the path coefficient as output is in Table 1.

**Table 1.** Correlations

		Learning Environment	Interest to learn
Learning Environment	Pearson Correlation	1	.930**
	Sig. (2-tailed)		.000
	N	60	60
Interest to learn	Pearson Correlation	.930**	1
	Sig. (2-tailed)	.000	
	N	60	60

\*\* . Correlation is significant at the 0.01 level (2-tailed).

From Table 1 obtained correlation coefficient  $r_{12} = 0,930$ . The value of correlation coefficient is also the value of the coefficient path. Test significance correlation coefficient obtained Sig value. (2-tailed) 0.000. Karena two-party test then the value of Sig must be divided 2. The division by two obtained 0,000. Because the value of Sig. = 0,000 < 0.050 then the correlation coefficient (path coefficient) interest in learning with learning environment significant (meaningful).

## 4 Conclusions

The result of learning about the balance of the student environment is directly influenced by the positive learning environment. This means that the more conducive the student learning environment the higher the achievement of their learning results about the material of environmental balance. Results of learning about the environmental balance of students are directly influenced by the positive interest in learning. This means that the higher interest in student learning the higher the achievement of their learning results about the material of environmental balance. Students' interest in

learning is directly influenced by the positive learning environment. This means that the more conducive learning environment that each student has, the higher his interest in learning about the material of environmental balance.
