This study is a quantitative research which uses cross sectional design. 100 respondents were selected by random sampling. Method of administration is face-to-face structured interview.

Results:

The results show 54% people used Jamkesmas in primary health care. According to the result of statistical analyses, factors related to utilization of Jamkesmas in primary health care are accessibility ($p= 0.0005$) and supports from family and health workers ($p=0.0005$).

Discussion:

In order to increase utilization of Jamkesmas, people need supports from their family and health workers to using primary health care. Health workers, such as doctor and nurse, have to increase quality of services to make patient more comfortable and build trust between doctor and patient. Easier accessibility, included distance, time, cost of transportation, are also needed to increase utilization.

Grand Design of Marine Based Curriculum For Early Childhood Education in The Province of Gorontalo

Ruslin Badu

Gorontalo State of University, ruslin_badu@yahoo.com, 085256499020

Key word : *Grand Design, curriculum, Marine based, Early Childhood educators*

Abstract : Human resource development program through early childhood education is a program that should be done immediately. This expected to accelerate the Gorontalo province government's policy of access for community services. The problem is how the conceptual model, how the implementation, and how the effectiveness of the grand designs of marine-based curriculum. The aim to set the initial conditions of the grand design of the marine-based curriculum preparing conceptual models of the grand design of marine-based curriculum, implement the model grand marine-based curriculum design, Test the effectiveness of the model grand marine-based curriculum design. Method of research used *research and development* by Borg and Gall The result (1) lack of understanding and skills of early childhood educators about the potential use of marine activities for play and learning activities. (2) the gap between understanding and condition of existing skills with the understanding and skills that should be possessed educators ideal as the person responsible for implementing the curriculum. (3) the average understanding and skills of educators increased significantly after attending workshop, (4) the motivation of educators to educate early childhood for the better, (5) grand design of marine-based curriculum developed shows effective improve the understanding and skills of early childhood educators.
