

ALPACR

An Open Access Peer-Reviewed Journal

# Asian Journal of Pharmaceutical & Clinical Research

## Welcome to AJPCR (Online ISSN: 2455-3891 | Print ISSN: 0974-2441)

AJPCR (Asian J Pharm Clin Res) started in the year 2008 and is a peer-reviewed monthly (onward Jan 2017) Open Access Journal. The journal publishes original work which has any correlation and impact in the field of Pharmaceutical Sciences and Clinical Research (Pharmacognosy, Natural Product, Pharmaceutics, Novel Drug Delivery, Pharmaceutical Technology, Biopharmaceutics, Pharmacokinetics, Pharmaceutical/Medicinal Chemistry, Computational Chemistry, Drug Design, Pharmacology, Pharmaceutical Analysis, Pharmacy Practice, Clinical Pharmacy, Pharmaceutical Biotechnology, Pharmaceutical Microbiology and Medicine etc). AJPCR publishes it as an original research article, short communication and case reports. The journal also publishes Reviews to keep readers up to pace with the latest advances under mentioned scopes.

## Why publish with AJPCR?

- Timely decisions: The standard time from submission to first decision is 20 days for regular articles
- Timely broadcasting: The average time from initial submission to publication for regular Research Articles is 40 days,
- Constructive reviews from renowned scientist and researcher at all editorial levels
- No page limits for regular articles.

## Abstracting and Indexing

## About the Journal

### Focus & Scope

AJPCR (Asian J Pharm Clin Res) started in 2008 and is peer reviewed monthly (Onward Jan 2017) open access Journal. The journal publishes original research in the field of Pharmaceutical sciences and Clinical Sciences. The Journal has been designed to cover all the fields of research, which has any correlation and impact on Pharmaceutical Science and clinical research (Pharmacognosy, Natural Product, Pharmaceuticals, Novel Drug Delivery, Pharmaceutical Technology, Biopharmaceutics, Pharmacokinetics, Pharmaceutical/Medicinal Chemistry, Computational Chemistry, Drug Design, Pharmacology, Pharmaceutical Analysis, Pharmacy Practice, Clinical Pharmacy, Pharmaceutical Biotechnology and Pharmaceutical Microbiology, Medicine). AJPCR publishes original research Article or as a Short Communication for original research work. The journal publishes Reviews to keep readers up to speed with the latest advances across diverse current scientific topics on under mentioned scopes are also considered for publication. In addition, a case report is also invited now for the publication.

### Publication Frequency

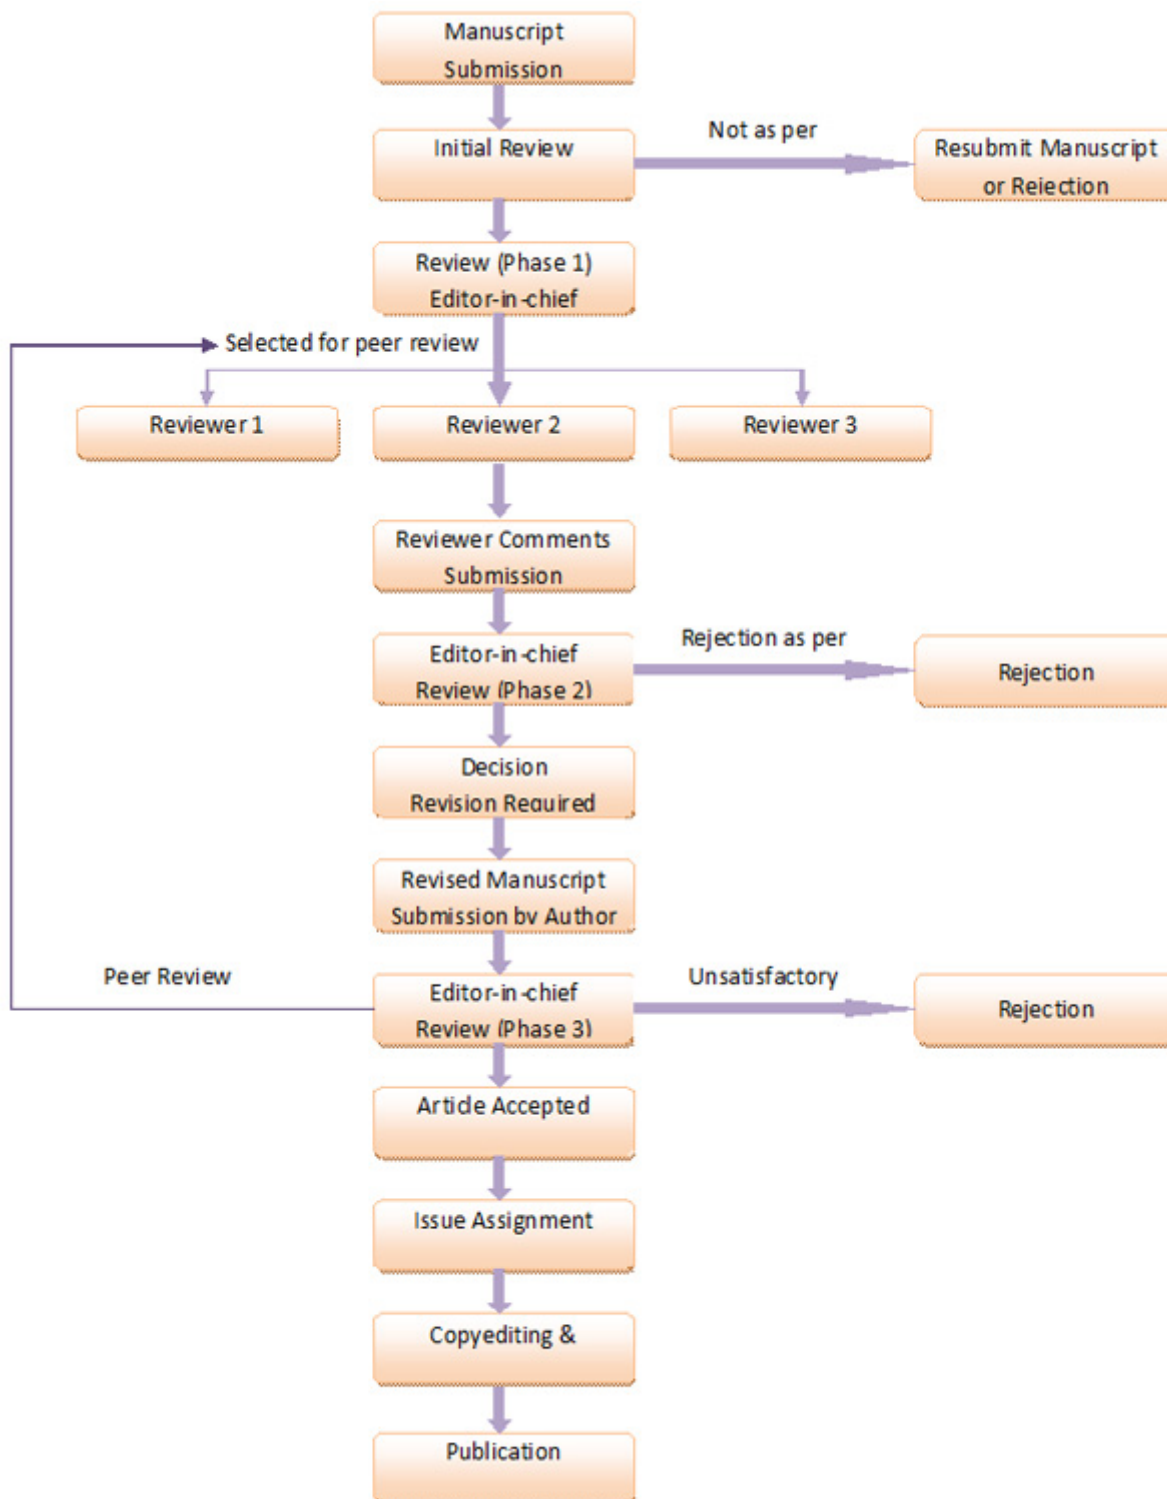

The journal had started in Jan 2008 with quaterly publication frequency. It is monthly onwards Jan 2017.

### Open Access Policy

This journal provides immediate open access to its content on the principle that making research freely available to the public supports a greater global exchange of knowledge. [For More Details Click Here](#)

### Peer Review Process

The AJPCR follows Double Blind Peer Review System. The detailed peer review flow is shown below:

## Peer Review & Publication Policy

## Editorial Board

### Editorial Board

AJPCR is committed to have dynamic and potential advisory-editorial board. Those established in the field can directly send their resume. New people are first needed to serve as referee before being considered member of advisory-editorial board. Email your resume to [editor@ajpcr.com](mailto:editor@ajpcr.com)

### Editor-in-Chief

- **Dr. Anurekha Jain**  
Dept. of Pharmaceutical Sciences, Jyoti Mahila Vidyapeeth University, Jaipur, Rajasthan  
Email: [anurekhajain@jvwu.ac.in](mailto:anurekhajain@jvwu.ac.in), [editor@ajpcr.com](mailto:editor@ajpcr.com)

### Associate Editor

- **Dr. Nuray Ari**  
Prof., Department of Pharmacology, Faculty of Pharmacy, Ankara University, 06100 Ankara, Turkey. Email: [ari@ankara.edu.tr](mailto:ari@ankara.edu.tr)
- **Lakshmi Narasmiha Rao Katakam**  
Analytical Development, Saptalis Pharmaceuticals LLC, Hauppauge, New York, USA 11788. Email: [klrao16@gmail.com](mailto:klrao16@gmail.com)

### Assistant Editor

- **Dr. Omotoso Abayomi Ebenezer**  
Prof., Department of Pharmaceutical & Medicinal Chemistry. Faculty of Pharmaceutical Sciences, University of Port Harcourt, Nigeria. Email: [abatoseb2001@yahoo.com](mailto:abatoseb2001@yahoo.com)
- **Dr. Vimal Kumar Jain**  
Principal, ITM School of Pharmacy, ITM Universe, Vadodara & Associate Dean, Pharmacy, GTU, Ahmedabad

### Editorial Board Members

- **Dr. Vikas Sharma**  
Shri Rawatpura Sarkar Institute of Pharmacy, Datiya, MP, India
- **Dr. Rupesh Kumar Gautam**  
Associate Prof., ADINA Institute of Pharmaceutical Sciences, Sagar, MP, India
- **Dr. Farhan Ahmed Siddiqui**  
Faculty of Pharmacy, Federal Urdu University Arts, Science and Technology Karachi, Sindh, Pakistan

- **Dr. Javad Sharifi Rad**  
Department of Pharmacognosy, Faculty of Pharmacy, Zabol University of Medical Sciences, P.O. Box 61615-585 Zabol, Iran
- **Dr. Rajesh Mohanraj**  
Dept. of Pharmacology, CMHS, UAE
- **Dr. Sami Saqf El Hait**  
Junior Executive - Quality Control At Jamjoom Pharmaceuticals Company Limited Jeddah, Saudi Arabia
- **Dr. Madhu Bala**  
Scientist 'F' and Joint Director, Institute of Nuclear Medicine and Allied Sciences (INMAS), India
- **Dr. Sandip Narayan Chakraborty**  
Research Asst, Translational Molecular Pathology, Ut Md Anderson Cancer Center, Life Sciences Plaza, Houston, TX 77030
- **Dr. Tushar Treembak Shelke**  
Head of Department of Pharmacology and Research Scholar, In Jspms Charak College of Pharmacy & Research, Pune, India
- **Dr. Subas Chandra Dinda**  
Professor-cum-Director: School of Pharmaceutical Education & Research (SPER), Berhampur University, Berhampur, Orissa, India.
- **Dr. Jagdale Swati Changdeo**  
Professor and Head, Department of Pharmaceutics, MAEER's Maharashtra Institute of Pharmacy, S.No.124, MIT Campus, Kothrud, Pune-411038
- **Dr. Biplab Kumar Dey**  
Principal, Department of Pharmacy, Assam down town University, Sankar Madhab Path, Panikhaiti 781026, Guwahati, Assam, India
- **Dr. Yogesh Pandurang Talekar**  
Research Associate, National Toxicology Centre
- **Dr. Indranil Chanda**  
Assistant Professor, Girijananda Chowdhury Institute of Pharmaceutical Science, Hathkhowapara, Azara Guwahati-17, Assam, India.
- **Dr. Sudip Kumar Mandal**  
Department of Pharmaceutical Chemistry, Dr. B. C. Roy College of Pharmacy & AHS, Bidhannagar, Durgapur-713206, India.
- **Dr. Neeraj Upmanyu**  
Prof., Peoples Institute of Pharmacy & Research Center, Bhopal, MP, India.

## Vol 11 Issue 9 September 2018

**PUBLISHED:** 07-09-2018

### CASE STUDY(S)

#### **ACECLOFENAC-INDUCED STEVENS-JOHNSON SYNDROME AFTER ONE SINGLE DOSE: A MAIDEN CASE REPORT**

SAURABH AGARWAL, BALAJI O, NAVIN PATIL

1-2

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

#### **DRUG-INDUCED EOSINOPHILIA SECONDARY TO THE COTRIMOXAZOLE ADMINISTRATION IN ACUTE BRUCELLA INFECTION**

JALIL MOSHARI, HAMID REZA NIAZKAR, MEHDI KARIMI SHAHRI, MOHAMMAD GHORBANI, RAHELEH DARAFSHI

3-4

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

#### **MULTIDRUG-RESISTANT POLYMICROBIAL BACTEREMIA AND SEPSIS: A RARE CASE REPORT**

SHIVASH SHAHBAZI NIA, SHADAN MODARES AHMADI, VITHYA THIRUMOORTHY, QAISAR ANWAR, SHANKAR PRASAD

5-8

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

#### **ANALYSIS OF COMPLEX CHROMOSOMAL ABNORMALITIES IN A CASE OF MULTIPLE MYELOMA USING SPECTRAL KARYOTYPING**

PERUMAL GOVINDASAMY, POOJA S KULSHRESHTHA, PRABU PANDURANGAN, ANIL TARIGOPULA, JAYARAMA S KADANDALE, CHANDRA R SAMUEL

9-11

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

## REVIEW ARTICLE(S)

### A BRIEF REVIEW ON PHYTOCHEMICAL AND PHARMACOLOGICAL PROFILE OF CARISSA SPINARUM L.

IMTIYAZ ANSARI, DIPTESH T PATIL

12-18

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### ROLE OF HERBAL MEDICINES IN VITILIGO TREATMENT - CURRENT STATUS AND FUTURE PERSPECTIVES

RADHAKRISHNAN NARAYANASWAMY, INTAN SAFINAR ISMAIL

19-23

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### REVIEW: GERMINAL CELL APOPTOSIS BY HERBAL MEDICINE

PUTRI CAHAYA SITUMORANG, SYAFRUDDIN ILYAS

24-31

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### COROSOLIC ACID: A SYNOPSIS ON ITS ANTICANCER PROPERTIES

ERIC WEI CHIANG CHAN, SIU KUIN WONG

32-36

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### CONNECTION APPROACHES BETWEEN TRADITIONAL AND MODERN PHARMACOLOGICAL PROFILE OF SHOREA ROBUSTA GAERTN. F.: A REVIEW

MANISH PAL SINGH, RAVI KUMAR

37-41

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### AN OVERVIEW ON THE BIOLOGICAL PERSPECTIVES OF AGLAIA SPECIES

PRIYA R, SOWMIYA P, MEENAKSHI SUNDARAM MUTHURAMAN

42-45

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### TREATMENT OF IRRITABLE BOWEL SYNDROME: A REVIEW

GUPTA BIKASH, DASH BISWAJIT, PAUL SUJATA, BORA JYOTI ADITYA

46-52

 [VIEW ABSTRACT](#)

 [PDF](#)

 [DOWNLOAD PDF](#)

### **A REVIEW ON MEDICAL ADVANTAGES AND CHEMICAL CONSTITUENTS OF CARICA PAPAYA LINN.**

ANJANA GV, PRIYA D, SRIMATHI R, SHANTHA KUMAR B

53-57

 [VIEW ABSTRACT](#)

 [PDF](#)

 [DOWNLOAD PDF](#)

### **MEDICINAL PLANTS AS ALTERNATIVE TREATMENTS FOR ORAL HEALTH PROBLEMS**

ISHFAQ KHAN, AZHAR KHAN

58-64

 [VIEW ABSTRACT](#)

 [PDF](#)

 [DOWNLOAD PDF](#)

## **ORIGINAL ARTICLE(S)**

### **LIQUID CHROMATOGRAPHY-MASS SPECTROMETRY ANALYSIS OF FRUITS OF AN ECONOMICALLY IMPORTANT PLANT SCHISANDRA CHINENSIS BAIL. FROM CHINA AND EAST RUSSIA**

LUFEROV AN, KARTASHOVA NV, STRELYAEVA AV, KUZNETCOV RM

65-67

 [VIEW ABSTRACT](#)

 [PDF](#)

 [DOWNLOAD PDF](#)

### **HYPERMETHYLATED DNA AS BIOMARKER FOR NASOPHARYNGEAL CANCER DETECTION**

THUAN DUC LAO, THUY AI HUYEN LE

68-71

 [VIEW ABSTRACT](#)

 [PDF](#)

 [DOWNLOAD PDF](#)

### **ANTI-INFLAMMATORY PROPERTIES OF PAVETTA CRASSICAULIS BREMEK. LEAF AND FLOWER CRUDE EXTRACTS AND ITS PURE COMPOUNDS COLLECTED FROM WESTERN GHATS, KARNATAKA, INDIA**

ASHWATHANARAYANA R, RAJA NAIKA

72-90

 [VIEW ABSTRACT](#)

 [PDF](#)

 [DOWNLOAD PDF](#)

### **VALIDATION OF THE SPECTROFOTOMETRIC METHOD FOR THE DETERMINATION OF QUANTITATIVE COMPOSITION OF S-2,6-DIAGENOXIC ACID OF 3-METHYL-1,2,4-TRIAZOLYL-5-THIOACETATE**

KUCHERENKO LYUDMILA IVANOVNA, BIDNENKO OLEKSANDR SERGEEVICH, KHROMYLOVA OLGA VLADIMIROVNA

91-94

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **IMMUNOGLOBULINS AND LIPID PROFILE OF CHILDREN WITH SICKLE CELL ANEMIA IN EKITI STATE, NIGERIA**

OYEYEMI A O, OYEBANJI O G

95-97

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **BISPHENOL A DOSE- AND TIME-DEPENDENTLY INDUCES OXIDATIVE STRESS IN RAT LIVER MITOCHONDRIA EX VIVO**

MOUSUMI DUTTA, GOUTAM PAUL

98-105

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **PREVALENCE OF INDUCIBLE CLINDAMYCIN RESISTANCE IN CLINICAL ISOLATES OF METHICILLIN-RESISTANT STAPHYLOCOCCUS AUREUS MEDIATED THROUGH GENE ERM C EXPRESSION**

NIMISHA TANDON, MADHURI KULKARNI, SOWMYA GS, FAUZIA TABASSUM, SAYEED AKHTAR MD

106-109

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **METABOLIC SYNDROME IN URBAN AND RURAL POPULATION OF GREATER NOIDA NATIONAL CAPITAL REGION OF INDIA**

MANOJ KUMAR SHARMA, SONALI PANDEY, SURYAKANT NAGTILAK

110-114

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **DEVELOPMENT AND VALIDATION OF ULTRAVIOLET-SPECTROPHOTOMETRIC METHOD FOR DETERMINATION OF FEBUXOSTAT FOR CONDUCTING IN-VITRO QUALITY CONTROL TESTS IN BULK AND PHARMACEUTICAL DOSAGE FORMS**

JASPREET KAUR, DALJIT KAUR, SUKHMEET SINGH

115-119

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **FORMULATION, DEVELOPMENT, AND CHARACTERISATION OF CILNIDIPINE LOADED SOLID LIPID NANOPARTICLES**

REMYA PN, DAMODHARAN N

120-125

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **PREPARATION AND CHARACTERIZATION OF NITRENDIPINE LOADED GRAFTED COPOLYMER MICROSPHERES: A PRELIMINARY STUDY**

SINDHU S, DHARANI S, BHAVANITHA V, PRADHIBHA S

126-129

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **A STUDY ON ADVERSE DRUG REACTIONS AND THEIR RISK FACTORS OF ANTI-ASTHMATIC AGENTS AMONG GARMENTS DUST-INDUCED ASTHMATIC PATIENTS IN MANCHESTER OF SOUTH INDIA**

MUTHUKUMAR A, SUNDARA GANAPATHY R

130-132

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **ASSESSMENT OF INFLAMMATORY STATUS IN TYPE 2 DIABETES MELLITUS PATIENTS**

PRIYADHARSHINI S, SAVITHA BASKER G, VISHNUPRIYA V

133-135

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **ANTIASTHMATIC ACTIVITY OF THE ETHANOL EXTRACT OF LEAVES OF WRIGHTIA TINCTORIA**

ZASEEM KHAN, IMTIYAZ ANSARI

136-139

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **NEW STABILITY-INDICATING ULTRA PERFORMANCE LIQUID CHROMATOGRAPHY METHOD DEVELOPMENT AND VALIDATION OF LENVATINIB MESYLATE IN BULK DRUG AND PHARMACEUTICAL DOSAGE FORMS**

JAHNAVI BANDLA, S. GANAPATY

140-143

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

### **THE CLINICAL EFFICACY OF SEQUENTIAL USE OF GONADOTROPIN-RELEASING HORMONE ANALOG - LEVONORGESTREL-RELEASING INTRAUTERINE SYSTEM IN MEDICALLY ILL WOMEN WITH SYMPTOMATIC AND RELATIVELY LARGE ADENOMYOSIS**

FADIA J ALIZZI

144-148

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

## **EVALUATION OF THE CYTOCHROME P450 INHIBITORY EFFECT OF THYME OLEORESIN FROM THYMUS VULGARIS L. - AN IN VITRO STUDY**

ROY ANITHA, ADELIN PERSIA R, THANGAVELU LAKSHMI

149-151

 [VIEW ABSTRACT](#)  [PDF](#)  [DOWNLOAD PDF](#)

**Keywords:** Sea cucumber, Hepatoprotective effect, Histopathology test, Mice, Liver

## ABSTRACT

**Objective:** Sea cucumber *Holothuria scabra* is one of the marine animals that can be consumed as food and also efficacious as a drug. One of the benefits of sea cucumber has high cell regeneration ability. This study aims to see the profile of hepatoprotective histology of sea cucumber extract on mice that have been given paracetamol toxic dose.

**Methods:** This experiment was conducted using experimental animal grouped of mice which were divided into six groups: Group I: sea cucumber extract 1%, Group II: 1000 mg/kg body weight (BW) or 25 mg/25 g BW, Group III: 750 mg/kg BW or 18.75 mg/25 g BW, Group IV: 500 mg/kg BW or 12.5 mg/25 g BW, Group V: positive control (curcuma tablet 2.5 mg/25 g BW), and Group VI: paracetamol group (62,5 mg/25 g BW). The histopathology test was performed to see the improvement of liver necrosis of mice.

**Results:** The results of histopathological study showed that all groups of mice livers experienced necrosis (cell damage) and abnormalities. In the group of sea cucumber extract having dose 500 mg/kg BW, liver cells experienced degeneration of fat and hemorrhage as in the group of curcuma tablet, but in Group VI (paracetamol group), liver of mice experienced apoptosis (cell death). In the histopathology test, results can also be seen that in Group IV at doses of 500 mg/kg BW, the liver experienced slightly less severity than all other groups.

**Conclusion:** The sea cucumber at doses of 500 mg/kg BW can improve the hepatic damage on mice induced by paracetamol.

### INTRODUCTION

Liver is an intermediary organ between the digestive system and blood. One of the important functions of the liver is to protect the body against the occurrence of accumulation of harmful substances such as drugs that inserted into the body from outside. Many of drugs are fat soluble and not easily excreted through urine so that the enzyme system in the liver microsomes will do biotransformation in such way to form a metabolite which is more soluble in water and can be excreted through the urine [1]. Regarding this phenomenon, it is not surprising that the liver has possibilities to be damaged by the drugs. In general, hepatitis due to drugs does not cause permanent damage, but sometimes it can persist and has fatal effect. Hepatotoxic is a chemical causing some toxic effects on liver cells [2]. With the excessive doses (toxic doses) or long-term retreating, this compound can cause an acute or chronic liver damage [3].

The management of liver disease is still a challenge to modern medicine as there is no effective drug available that stimulates liver function, offer protection to the liver from damage or help to regenerate hepatic cells. The only drugs available are corticosteroids and immunosuppressive agents. However, these suffer with several adverse effects. It is, therefore, necessary to search for alternative drugs for the treatment of liver diseases to replace currently used drugs of doubtful efficacy and safety [4]. In the present day scenario, nearly half of the agents used in liver diseases are either natural products or derivatives of natural products due to their ability to act on various biological targets, so there remains a great interest in the search for natural products from plants, terrestrial, and marine animals and microorganisms as potential drug chemical leads for the treatment of a liver disease. Among the wide range of natural sources, herbal and marine source play a key role, where 65% of patients in US and Europe depend on herbal preparations for the treatment of liver diseases [5].

Utilization of natural materials as a traditional medicine began to be developed, and testing has also been done to obtain more satisfactory results in terms of treatment and the side effects. Sea cucumber *Holothuria scabra* is marine biota which is widely used as a traditional medicine. Sea cucumber contains antibacterial, antifungal, antitumor, and anticoagulant ingredients. Zancan and Mourao's, 2004, described that in addition to wound healing, sea cucumber extract also contained anticoagulant and antithrombotic compounds [6]. The research that has been done by Abdulkadir, 2010, illustrated that at a concentration of 35%, sea cucumber suspension had hepatoprotective effect and improved liver tissue [7].

Meanwhile, Nurhidayati, 2010, stated that sand cucumber was capable of preventing damage to hepatocytes induced by carbon tetrachloride and the highest protective effect was obtained at a dose of 50 mg/200 g body weight (BW) of the experimental animal. However, there is no real correlation between increasing doses of the sand cucumber with its hepatoprotective effect against carbon tetrachloride. In addition, Novrita and Nurhidayati, 2016, described that *H. scabra* can improve liver fibrosis in mice induced by carbon tetrachloride. Regarding this, Abdulkadir and Tungadi, 2017, found that sea cucumber *H. scabra* extract at a concentration of 1% can improve the severity level of hepatic damage in mice by reducing the parameter of serum glutamate pyruvic transaminase (SGPT) and serum glutamic oxaloacetic transaminase [8]. Therefore, in this research was continued by describing histopathological study of sea cucumber extract as hepatoprotective effect.

### MATERIALS AND METHODS

#### Materials

Sea cucumber *H. scabra* was derived from Wajo village, Tilamuta, Boalemo, Gorontalo, Indonesia.

### Extraction of sea cucumber

The sea cucumber samples were processed by splitting and removing the stomach contents and then washed with clean water until it was clean and free of dirt, then it was cut into small pieces and dried for 2 weeks under the direct sunlight. The dried sample then put into a container of maceration and soaked with methanol until the surface of all sea cucumber was completely immersed. The result then stirred every day 3 times, and the solvent was replaced every 3 days with the same treatment. The extracted solution from the first day to the last day (on the 15<sup>th</sup> day) was mixed to be evaporated until it produced a viscous sea cucumber extract. The viscous extract was evaporated again at room temperature until dry and then prepared it to the next test.

### Preparation of Na-carboxymethyl cellulose (CMC) 1% suspension

The Na-CMC suspension was prepared by dissolving approximately 1.0 g of Na-CMC that had been carefully weighed into 100 ml of distilled water (which had been heated at 70°C) gradually and stirred with an electric stirrer until homogeneous suspension was formed.

### Preparation of paracetamol suspension into hepatotoxic dose 250 mg/kg BW

Paracetamol was suspended into 1% Na-CMC prepared by diluting 625 mg of paracetamol that was carefully measured into 100 mL of Na-CMC 1% (hepatotoxic paracetamol 6.25 mg/25 g dose against the mice BW).

### Preparation of dry extract of sea cucumber into Na-CMC 1% suspension

The dry extract of sea cucumber was suspended into Na-CMC 1% suspension made by dissolving the dried extract which had been weighed according to the desired concentration of 1%; 1000 mg/kg BW, 750 mg/kg BW, 500 mg/kg BW, curcuma tablet 2.5 mg/25 g BW, and paracetamol group 62.5 mg/25 g BW of the mice.

### Ethical consideration

Experimental protocols and procedures used in this study were approved by Health Ethics Committee, The Faculty of Medicine, Hasanuddin University, No.325/H4.8.4.5.31/PP36-KOMETIK/2017. All the experimental procedures were carried out in accordance with international guidelines for the care and use of laboratory animals.

### Test of dried sea cucumber extract as hepatoprotective effect

The treatment group of the dried sea cucumber extract (1%) was administered orally of 1 ml/25 g BW to the mice, every day for 7 consecutive days, at 30 min afterward, paracetamol as hepatotoxic dose was administered at a dose of 62.5 mg/25 g BW mice. On the 8<sup>th</sup> day, the blood was taken, and the liver surgery was performed (Group I).

This protocol was repeated the same way in the different doses for Group II (1000 mg/kg BW or 25 mg/25 g), Group III (750 mg/kg BW or 18.75 mg/25 g BW), Group IV (500 mg/kg BW or 12.5 mg/25 g BW), Group V (2.5 mg/g BW), and Group VI (Na-CMC 1% solution 1 ml/25 g).

### Histopathological preparation from the mice liver

On the day 9<sup>th</sup>, the liver of the mice was cut with 3-mm microtome then the fixation was conducted. After that, the preparation was inserted successively into 50% ethanol solution for 30 min, 90% ethanol for 30 min, and ethanol absolute for 30 min, each having two treatments [9].

The preparation then fed into paraffin-xylol, then sterilized in the oven for 1 h at 60°C. The preparation was transferred into the liquid paraffin for 1½ h into the preparatory block. In addition to print, the preparation was cut as thick as 5 microns then attached to a glass object that had been given albumin glycerin and heated at 50°C until it was dry. After drying, it was put into pure xylol for 5–10 min. Preparations were taken and fed into ethanol solution 96%, 90%, 70%, and 50% for 5–10 min, gradually. The preparation then washed with water then fed into the Ehrlich dye solution for 5 min. The result was washed with clean water then put into ethanol solution gradually of 50%, 70%, 90%, and 96% and into ethanol absolute. After that, it was inserted into eosin-alcohol

for 1–2 min; then, the result was rinsed into water then put into ethanol 50%, 70%, 90%, and 96% then into absolute ethanol and xylol. The preparation then dried at room temperature and covered with canned balm and glass objects then observed under a microscope.

### RESULTS AND DISCUSSION

Histological test results can be seen in the Fig. 1 which consisted of six pictures, that is, Group I (62.5 mg/25 g BW of paracetamol dose), Group II (1000 mg/kg BW of sea cucumber extract), Group III (750 mg/kg BW), Group IV (500 mg/kg BW), Group V (curcuma tablet doses of 2.5 mg/g), and Group VI (Na-CMC 1%).

This study used paracetamol induction doses of 62.5 mg/25 g given orally to induce liver cell necrosis and sea cucumber administration performed before paracetamol administration aimed to see the effect of liver protection by sea cucumber extract. Hence, this study focuses on the preventive concept to see the potential of sea cucumber as a hepatoprotective material. The previous study explained that SGPT value on mice which induced paracetamol showed dose 500 mg/kg of sea cucumber extract had given hepatoprotective effect (SGPT 32 u/l) which proven by histological test [8].

From the histological test, this can be seen that all groups of mice liver experience necrosis (cell damage) and abnormalities. In the group of sea cucumber extract on doses 500 mg/kg BW, liver cells experience degeneration of fat and hemorrhage as in the group of curcuma tablet, but in Group VI (paracetamol group), liver of mice was apoptosis (cell death). In the histopathology test results also seen that in Group IV at

**Fig. 1: Photomicrograph of mice livers in the various groups: (a) Group I: Paracetamol doses (62.5 mg/25 g) showing the necrosis histological structure of hepatic lobule; (b) Group II: Sea cucumber extract doses (1000 mg/kg BW) showing apparent normal hepatic parenchyma (long narrow); (c) Group III: Sea cucumber extract doses (750 mg/kg BW) showing lipid generation (short narrow); (d) Group IV: Doses of 500 mg/kg BW showing Kupffer cell activation (short arrow); (e) Group V: Curcuma tablet doses (2.5 mg/g) showing hepatocyte cell degeneration (short narrow); and (f) Group VI: Na-CMC 1% showing apparent normal hepatic parenchyma (short narrow) which is similar with Group II**

doses of 500 mg/kg BW, the liver experience slightly less severity than all other groups.

Histopathologic observations described the effective doses of sea cucumber extract to prevent fatty is at a dose of 500 mg/kg BW. This is presumably because of the high protein content (86%) that is easily broken down by the enzyme pepsin, of that amount about 80% of collagen. Proteins, especially amino acids, glycine, and glutamate, as the main component of glutathione (GSH) are able to reuse by GSH which is exhausted due to the toxicity of paracetamol in cytoplasm and mitochondria. GSH is a robust peroxy-nitrite eliminator and prevents the effective formation of nitro-tyrosine, greatly reduces the necrosis of liver cells due to paracetamol and activates cell regeneration cycles.

This is related to Sharma and Paliwal 2010 research stated that one of the most important antioxidant systems is the GSH redox cycle [10,11]. GSH is highly abundant in cytosol, nuclei, and mitochondria and is the major soluble antioxidant in these cell compartments. Reduced GSH, the main component of the endogenous non-protein sulfhydryl pool is known to be a major low-molecular-weight scavenger of free radicals in the cytoplasm [12]. The depletion of GSH promotes the generation of reactive oxygen species and oxidative stress with a cascade of effects, thereby affecting functional as well as the structural integrity of cell and organelle membranes [13]. The elevated level of GSH protects cellular proteins against oxidation through the GSH redox cycle and also directly detoxifies reactive oxygen species and/or neutralizes reactive intermediate species generated from exposure to xenobiotics including chemical carcinogens [14,15].

## CONCLUSION

The extract of sea cucumber at doses of 500 mg/kg BW can improve the hepatic damage on mice induced by paracetamol.

## ACKNOWLEDGMENT

We would like to thank to the Ministry of Research and Technology of higher education for the support of the funds and the Head of Fisheries Department of Gorontalo Province and also thank you for the Chairman of Commission II of the provincial legislative assembly of Gorontalo for assisting to provide the sample.

## AUTHOR'S CONTRIBUTION

Mrs. Widy S Abdulkadir - Review of literature and data analysis.  
Mr. Robert - Data collection.

## CONFLICTS OF INTEREST

The authors claim that there are no conflicts of interest.
